

Tight Deadlines Case Study

Example of ECI’s strong capacity under tight deadline

Request

Content	Language Pair	Page Number
Clinical Protocol	en>esES	233
Word Counts	Requested TAT	Workflow
44793	5 natural days including the weekend	File Conversion → Translation + Review→ QA → Final Layout Check

Output

Projects of similar scope would typically require at least 10 business days for completion. However, ECI leveraged its global team and optimized resource coordination in Chinese linguistic team to significantly enhance efficiency while maintaining high quality.

ECI Approach

Cross-Time Zone DTP Collaboration

DTP specialists from different time zones worked in parallel, ensuring continuous progress without delays.

Batch Processing for Efficiency

Instead of a linear workflow, pre-processing and translation were carried out simultaneously to accelerate the overall timeline.

Highly Synchronized Linguistic Teams

A total of 12 linguists were assigned to the project, including 7 for translation and 5 for review, ensuring a balanced workload and efficient turnaround.

Dedicated Quality Control

2 Language Leads were assigned—one overseeing translation and the other review—to maintain quality and consistency across the project.

On-Time Delivery

Through strategic coordination and optimized workflow management, the project was successfully delivered on schedule.

Summary

This case study highlights ECI’s ability to leverage global resources and smart workflow structuring to meet tight deadlines without compromising quality.
